Hmm. How important is this? Currently the sum is used as a placeholder of sorts to determine which level comparisons should be done at (when plots have multiple depths of category), and it would take some re-engineering to add it. If it's important I can work on it, though.

Not very important. Idea is to get nice MC decompositions (all_overlay, which includes all_sum), but also the ratios total MC vs total MC, or total MC vs data. An easier solution would be to allow disabling all_sum, and the user (me) can add just add "total" as one of the options.

Hmm. Well, it's not that much easier under the hood. But I'll ruminate on it. :)
